

Control IQ Version 2 – Add a Workstation

- **Determine if your computer has Microsoft .Net Framework 2.0 installed**
 1. Click on your “Start” button and go to Setting / Control Panel.
 2. Select Add/Remove Programs.
 3. Scroll down through the list. If you do not find an entry entitled “Microsoft .Net Framework 2.0” you will need to perform Microsoft Updates.

- **Microsoft Updates (if needed)**
 1. Launch Internet Explorer and browse to <http://update.microsoft.com>.
 2. If you have not visited this site previously/recently, you may be required to install a new “Update Tool”. Accept the defaults.
 3. Eventually you will get to a screen where you have two options; Express or Custom. Select “Custom”.
 4. It will perform a scan of your system and return a list of critical updates you need. Along the left-hand side of the screen will be a series of links. Select the one titled “Optional Software”.
 5. Select the Microsoft .Net Framework 2.0 from the list and then “review and install”.
 6. This is going to take a while depending on your connection speed. Eventually, it will have you restart your computer.
 7. Return to step 1 of this section. Continue to perform updates on your machine until there are no further updates available.

Assuming the "Server" has an IP address of 123.123.123.123

- **Setup Internet Explorer Trust Level**
 1. Bring up Internet Explorer 6.0 or greater (Older versions and Netscape WILL NOT work)
 2. Click on ‘Tools’
 3. Click on ‘Internet Options’
 4. Select the ‘Security’ Tab’
 5. Click on ‘Trusted Sites’
 6. Click on ‘Sites’
 7. Uncheck the box "Require server...."
 8. Under "Add this web...." Type in <http://123.123.123.123/ciq>
 9. Click Add
 10. On the bottom of that panel is the Security Level for each of the zones. If it says ‘Custom’ click on “Default Level” to show the slide bar.
 11. Drag the slide bar all the way to “Low”
 12. Click Ok
 13. Close all windows

- **Create a shortcut on the browser.**
 1. Right-Click anywhere on the desktop and select 'New / Shortcut'
 2. When it prompts "Type in a location" type in: <http://123.123.123.123/ciq>
 3. Click Next
 4. When it prompts for a name choose "ControlIQ"
 5. Click Finished

- **Run the StrongNameInstaller**
 1. Launch Internet Explorer
 2. Browse to <http://www.saicorporate.com/sni>
 3. Run the install application, accepting all the defaults.

Congratulations, you are ready to run the application.

The first time you run the application from a new location, it will take extra time. Subsequent visits will be faster.
